## Asset Management

MDD Issue Date: 2018/07/02

### Fund Objective

The primary objective of the portfolio is to maximise returns over the longer term, at the risk of greater short term volatility of capital values. The investment manager has substantial flexibility to vary the asset allocation across the various asset classes in such a manner as deemed appropriate.

### Fund Strategy

The portfolio will actively invest across the full spectrum of asset classes such as bonds, property shares, equities, financial instruments, participatory interests in trust schemes, cash and money market instruments. The manager may from time to time invest in participatory interests in portfolios of collective investment schemes registered in the Republic of South Africa. The portfolio will also be allowed to invest in listed and unlisted financial instruments (derivatives) as allowed by the Act from time to time. The manager may also include forward currency interest rate and exchange rate swap transactions, for efficient portfolio management purposes. The Manager shall be permitted to invest, at its discretion, on behalf of the portfolio in offshore investments as legislation permits.

### Fund Information

Maximum Initial Advice Fee	3.45
Maximum Annual Advice Fee	—
Manager Annual Fee	1.43
Total Expense Ratio	1.49
Transaction Cost	0.44
Total Investment Charges	1.93
Performance Fee	—
TER Measurement Period	01 April 2015 - 31 March 2018

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product.

\*The Truffle Sanlam Collective Investments Flexible Fund transitioned to Sanlam Collective Investments (RF) (Pty) Ltd on 11 November 2017.

### Risk Profile

#### Moderate Aggressive

Your primary aim is to achieve the required capital growth necessary to realise your long-term goals and objectives. You are prepared to tolerate fluctuations in your returns because you know that the longer-term picture is worth the short term pain, even if that means you lose money sometimes. While diversified across all the major asset classes, your portfolio will be tilted more towards equities because you know they offer the best long-term returns of all the asset classes and thus your wealth will grow over time.

### Glossary Terms

#### Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

#### Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

#### Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, bi-annual or annual distribution pay-outs.

#### Derivatives

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

#### Liquidity

The ability to easily turn assets or investments into cash.

#### Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

#### LISP (Linked Investment Service Provider)

A Linked Investment Service Provider is a financial institution which packages, distributes and administers a broad range of unit trust based investments. Any investment made through these products gives an investor a single point of entry into a selection of different investments.

#### Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

#### Money Market Instruments

A money market instrument is a low risk, highly liquid, short-term (one year or less) debt instrument, issued by financial institutions or governments, that tend to have lower returns than high-risk investments.

#### Participatory Interests

When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

#### Regulation 28

Regulation 28 of the Pension Funds Act sets out prudent investment limits on certain asset classes in investment funds. It applies specifically to investments in Retirement Annuities and Preservation Funds. The allowed maximum exposures to certain asset classes is: 75% for equities, 25% for property, 30% for foreign (offshore) assets and 10% African assets.

#### Risk-adjusted returns

Risk-adjusted return refines an investment's return by measuring how much risk is involved in producing that return, which is generally expressed as a number or rating.

#### Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

#### Standard Deviation

Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an investment.

### Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available from the Manager, Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign instruments which could be accompanied by additional risks as well as potential limitations on the availability of market information. Investments in foreign instruments are also subject to fluctuations in exchange rates which may cause the value of the fund to go up or down. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Truffle Asset Management (Pty) Ltd, (FSP) Licence No. 36584, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12-month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. ## Portfolio Manager Comment

As at 31 March 2018

### Market Overview

#### Positive momentum continued to build through the quarter

The new leadership of the governing ANC and the country that came to power late last year has continued to instill a new sense of optimism in the country that filters through into many walks of life within South Africa. The first quarter has gone far better for South Africa than 2017, and we are hopeful that further positive news will continue to emerge throughout the year. Ramaphosa's cabinet continues to enjoy the benefit of doubt from the international rating agencies as it was heartening that Moody's maintained South Africa's debt rating at investment grade, despite historic economic data suggesting otherwise. Inflation has continued to fall significantly over the last 15 months, reaching 4% by quarter end. This achievement was undoubtedly helped by the strong Rand but laid the foundation for the recent 25bp cut in interest rates, bucking global pressure for rates to rise. We do not expect inflation to fall much further but strong upward inflationary pressures currently remain absent. Further, the SARB has revised the country's growth expectations for 2018 and 2019 modestly higher to 1.4% and 1.6% respectively. This expected growth rate is far below satisfactory but at least the numbers are going in the right direction and it would not surprise us to see these numbers lifted further during the course of the year. Business confidence has also improved significantly.

The very deep-rooted problems within the SOE's are finally being addressed by the Ramaphosa government with new leadership having been appointed to many of them, but most notably Eskom and SAA. For many years the government has spoken out against corruption but finally it appears as if they are now serious. This is very good news for the country provided it is carried through.

#### The global economic backdrop, though positive, has plateaued with the prospects of a trade war looming

Through 2017 it appeared that the global economy was slowly recovering. US growth was strong, European growth continued to improve and Asian growth, although slowing, remained at a high level. However, we are now seeing a number of country PMIs falling. A potential slowdown is most notable in the Euro region where numerous countries are delivering economic metrics below expectations. Recent tariffs introduced by President Donald Trump against many countries but most noticeably China, and their inevitable retaliation, has increased the probability of a global trade war.

Unfortunately, in this scenario there are no short-term winners and we can only assume that the United States is intent on resetting its long term trade relationships with many of its key trading partners. Some form of resolution will be needed to avert a negative outcome for the global economy.

#### Corporate scandals remain unresolved

Unfortunately, the positive developments within the political sphere were not duplicated in the corporate sector. The Steinhoff accounting irregularities scandal remains unresolved. At this time we are waiting for the revised, and hopefully reliable, financial statements but there is no clarity as to when they might be available.

Accusations of share price manipulation within the Resilient Property Group had a devastating impact on share prices through the quarter that also affected the property index badly. This matter is also unresolved.

#### Equities had a bad quarter

The MSCI All World index fell by 2.4% over the quarter. This was against the global backdrop of a potential trade war and falling PMIs in many countries. The FTSE All Share equity index contracted by 6% over the quarter. The severity of the quarterly fall was mostly affected by weakness in the Resilient stable of property companies and the 16.2% fall in the Naspers share price which together accounted for 75% of the decline. Given the expected improvement in local economic fundamentals, it was not surprising that General Retailers (+9.2%) and Banks (+4.2%) bucked the negative trend and had a good quarter.

The property index contracted by 19.6% over the quarter but this was almost solely due to the implosion of the companies within the Resilient stable of property companies, where we had no exposure.

#### Bonds had a particularly good quarter

Moody's decision to raise the outlook for SA from negative to stable and hence, maintain SA in the World Global Bond Index aided the continued strength in the local bond market. The ALBI return for the quarter was 8.1%, influenced in the main by the 10.0% return from the ALBI 12+ years index. Over the quarter long dated bonds rates fell from 8.7% to 8.2%.

#### Portfolio positioning

Post the Ramaphosa victory, and consequent outperformance of domestically focused companies over foreign and rand hedge counters, we have started to switch out of domestically focused companies into more reasonably valued rand hedge counters. Furthermore, the strength in the rand has also meant that the currency risk associated with owning rand hedge shares has significantly diminished.

We increased our exposure to Sasol, where negligible value is being placed on their ethane cracker project. Once the ethane cracker is commissioned at the end of this year we think the market will start to price in the additional \$1.4bn of EBITDA expected from the project.

The exposure to Naspers has also been increased given the recent underperformance and its significant discount of over 40% to its underlying constituents. Tencent, which represents the bulk of the value in Naspers is now trading at a more reasonable valuation.

We have also increased our exposure to Royal Dutch Shell given its compelling valuation and continued delivery of strong operating metrics. The company has reduced its breakeven oil price to below \$50 per barrel, given the current level of oil prices above \$60, free-cash-flow yields are very attractive.

Within the domestically focused space we still see significant value in Old Mutual which is trading on a PE multiple of less than 11X in an expensive domestic universe. We expect to see an unbundling of its UK Wealth business in the next few months. This should create interest from a new class of investors who will only invest in a cleaner structure with exposure solely to emerging markets. We have been steadily reducing our exposure to banks and retailers as prices have rallied. We did purchase some Woolworths as it is one of the few retailers still reflecting value.

We increased our exposure to Growthpoint and Redefine given their higher prospective returns versus other domestic equity and offshore property opportunities. We reduced our exposure to Sirius Real Estate which has reached fair value.

We invested 2% of the multi asset funds in long duration bonds in December and sold out at the end of February. We continue to invest the bulk of the fixed income portion of the portfolios in high yielding floating rate bank sub-debt.

Investment performance was positively influenced by the outperformance of domestically focused companies over offshore and rand-hedge counters. Financials including Old Mutual and Firstrand contributed positively to performance, as did retailers, including Shoprite, Long4life and The Foschini Group. Our investment in local property companies Growthpoint and Redefine also benefited from a more optimistic domestic outlook and lower interest rates.
