Truffle SCI* Income Plus Fund

Fund Objective

The Fund aims to achieve higher yields of income than money market portfolios, while aiming to preserve capital through actively investing in a range of predominantly South African fixed income securities.

Investment Policy Summary

The fund is actively managed through varying market cycles to exploit income earning opportunities while managing the risk of capital loss. The fund invests in a range of fixed income securities including corporate and government bonds and money market instruments that pay regular interest. Other investments may include units of other South African funds and offshore investments as legislation permits. The fund will predominantly invest in short term fixed income securities, but may include a proportion of longer dated securities, within permissible parameters for a predominantly South African, short-term interest-bearing portfolio. The fund may also invest in derivative instruments for efficient portfolio management purposes.

Why Choose This Fund?

- 1. Invest in a broad range of meticulously selected fixed income securities.
- 2. Truly active portfolio management where opportunities are clearly identified and exploited.
- 3. A strong focus on downside risk management that aims to protect capital through all market cycles.

Glossary Terms

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, bi-annual or annual distribution pay-outs.

Derivatives

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Liquidity

The ability to easily turn assets or investments into cash.

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

LISP (Linked Investment Service Provider)

A Linked Investment Service Provider is a financial institution which packages, distributes and administers a broad range of unit trust based investments. Any investment made through these products gives an investor a single point of entry into a selection of different investments.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Money Market Instruments

A money market instrument is a low risk, highly liquid, short-term (one year or less) debt instrument, issued by financial institutions or governments, that tend to have lower returns than high-risk investments.

Participatory Interests

When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

Regulation 28

Regulation 28 of the Pension Funds Act sets out prudent investment limits on certain asset classes in investment funds. It applies specifically to investments in Retirement Annuities and Preservation Funds. The allowed maximum exposures to certain asset classes is: 75% for equities, 25% for property, 45% for foreign (offshore) assets.

Risk-adjusted Returns

Risk-adjusted return refines an investment's return by measuring how much risk is involved in producing that return, which is generally expressed as a number or rating.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an investment.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available on request from the Manager. Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained on request from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macroeconomic situations, foreign exchange, tax, settlement, and the availability of information. Investments in foreign instruments are also subject to fluctuations in exchange rates which may cause the value of the fund to go up or down. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Truffle Asset Management (Pty) Ltd, (FSP) Licence No. 36584, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12- month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266. *SCI is the abbreviation for Sanlam Collective Investments.

Portfolio Manager Comment

As at 31 December 2023

Economic Overview

Equity markets make a comeback

Global equity markets (except for China) made a comeback in the fourth quarter, spurred by fresh optimism of imminent US rate cuts following a two-year hiking cycle. Once again, the broader US economy failed to succumb to pressure from higher rates while China continued to disappoint.

South Africa’s market performance remains sensitive to global and local economic data and newsflow as investors seek positive outcomes for deep idiosyncratic challenges.

US headwinds building

The US is yet to slow down. Inflation continued to fall with buoyant but lower wage growth while employment and GDP growth stayed resilient. Pandemic savings, fiscal spending, fixed mortgages, and the wealth effect benefit from higher property prices and equity markets more than offset the impact of higher rates.

The factors driving economic resilience in 2023, are likely to become headwinds into 2024. Consumers’ excess savings for middle to lower income groups are now largely depleted and credit card delinquencies and defaults are accelerating. The lagged effect of a tight monetary policy may well be more extreme in the US in 2024 given the long term of their mortgage debt. US monetary policy is tight with one-year real rates at 2.8% relative to median rates of the last decade that were only marginally positive. Unless rates go back to zero real, even lower rates than today will still be a headwind as long-term debt reprices.

High levels of government spending growth in 2023 will likely detract from US GDP growth going forward. Falling job openings increases the risk of the unemployment rate rising from current low levels which will be negative for consumption.

The bond market is pricing 1.3% of rate cuts in 2024 and reaching a rate of 3.3% by the end of 2025. This implies the market is pricing in a soft landing and inflation stabilising back to a long-term trend in the low 2% range. US equity markets appear to be pricing in an optimistic outlook with Price Earnings (PE) ratios of more than 19.5 and punchy EPS growth expectations of 10% p.a. over the next 2 years.

US expected real returns are about 3.3% vs real bond returns of 1.8% meaning a paltry 1.5% equity risk premium. The S&P500 may have risen 25% in 2023 however the top 10 stocks accounted for 75% of this return and now comprise 35% of the index representing significant concentration risk. The equal weighted S&P500 is more reasonably priced but also offers a low return of 4.3% real relative to 1.8% from US bonds.

The US Fed estimates that 50% of real corporate profit growth between 1984 and 2020 was from a secular fall in interest rates and corporate tax cuts. This will not be repeated. A further long-term concern for markets is the significant level of future bond issuance which places downward pressure on yields.

China’s prospects uncertain

China stood out as the underperforming economy and market in 2023 and continues to face significant structural challenges. Geopolitics is weighing heavily, and inbound foreign direct investment is at multi-decade lows. The Chinese consumer remains depressed and saved more in the first 10 months of 2023, despite the economy opening.

Overall Fixed Asset Investment in China grew 2.5% year on year, helped by manufacturing and infrastructure. However, the key driver of metal demand historically has been China’s growth in property investment which declined 9%.

The Chinese Economic Work Conference in December recommitted to the “industrial economy”. There was emphasis on quality of growth and recognition that the property sector is a major economic and financial risk. Again, they reiterated that housing is for living and not speculation. Regulatory policy seemed to be easing although not consistently, as evidenced by a further gaming regulatory crackdown in December. Furthermore, a reduction of available economic data and concerns regarding the accuracy of GDP data adds additional risk to the Chinese investment thesis.

While the risks to investing in China remain high, Japanese equity is well positioned to benefit from structural and cyclical factors arising in Japan over 2023. Business friendly stock market reforms are supportive of unlocking value. Companies could face delisting if they do not improve capital allocation to boost valuations and returns. Unwinding of cross holdings should also be a positive catalyst. Returns on capital already appear to be improving and valuations are reasonable with PE’s trading in line with long run history.

Japanese wages reached a 26-year high in 2023 and are expected to remain above 2% over 2024. The Bank of Japan will maintain accommodative monetary policy unless wages exceed 3%. Against a backdrop of economic strength, the Japanese yen is one of the most undervalued currencies on a purchasing power of parity basis.

South Africa’s elections pivotal for growth

By the fourth quarter of 2023, South Africa’s idiosyncratic challenges including load-shedding had been well established with the focus shifting from short term crisis management to long term reform. The local equity market rallied in Q4 supported by global sentiment and prospects of lower interest rates however local economic challenges persist.

The outcome of South Africa’s 2024 elections, likely to be held in May, will be critical. Voter turnout and the youth vote are two key unknowns and while polls are notoriously noisy, at this stage there is alignment around an ANC outcome of between 43% and 46%. Many changes are possible before election day, but it appears likely that the result will be some form of coalition government.

SA’s economic headwinds remain unchanged with tight monetary policy likely to be in place until after the election and/or when the US Fed starts cutting rates. A reduction and stabilisation of load-shedding is beneficial for business outlook however other than tourism strength over December, consumer data remains subdued and logistics challenges weigh heavily on economic growth prospects. Transnet’s turnaround efforts are positive although complex and will take time following years of poor management.

Low economic growth continues to place pressure on fiscal consolidation, and SA will need to reduce SOE debt or grow GDP to reach a healthier sovereign balance sheet.

Low valuations across both SA’s equity and bond markets continue to partly take account of the above-mentioned macroeconomic risks. Credit spreads on SA bonds reduced over the quarter to trade in line with the median of the last 5 years. Any further strength will likely require a decline in global rates.

Summary and outlook

As interest rates peak globally, markets are optimistic around the speed and magnitude of a rate cutting cycle in 2024. However, central banks are likely to be cautious in their approach, avoiding any chance of inflation spiking once again.

Locally, we remain exposed to Financials where we still think absolute valuations are compelling. The dividend yield of our aggregate holding is circa 8%. Domestic small and mid-cap industrials are also reflecting compelling value with a few counters trading on PE multiples of 5-6 including Motus and Supergroup. Several high quality offshore exposed ALSI listed companies are also trading on generous valuations including Bidcorp and Anheuser Busch.

We remain underweight the US equity market in our offshore positions and prefer to hold short dated fixed income given the stretched US equity market valuations. European stock markets are trading in fair value territory while we have increased our exposure to Japan given reasonable valuations and constructive changes to the Japanese economy.

Performance & Positioning

Performance and Portfolio movements

The SA Monetary Policy Committee made no changes to rates over the 4th quarter of 2023 maintaining a repo rate of 8.25%. Further moderation in the SA core CPI print, from 4.8% to 4.5% over the period means the real policy rate now stands at 2.75% (previously 3.5%) but is still considered restrictive. Risks to headline inflation did however rise higher during the quarter, as geopolitical events across Israel and Gaza drove higher oil prices. However, a December oil price retreat from the recent peak, is still to filter through to headline CPI numbers given the lag effect.

Globally, inflation has maintained a downward trend, and US core inflation came down from 4.4% to 4.0%. over the quarter. The US labour market remains resilient, but signs of lower wage growth support the fight against inflation, reinforcing the narrative of a possible soft landing.

With the mist lifting, the US Fed have their goal in sight and in the last two months of 2023, the Fed’s remarks have lead to a repricing of future policy rates. This has filtered through the US Treasury curve and globally bonds rallied into year-end, underpinned by the decrease in the global risk-free rate.

We believe that rates have peaked and the market appears to be pricing in a near perfect scenario in terms of imminent rate cuts, where inflation reaches target and the probability of a recession diminishes. Increasing geopolitical tensions, do however pose an upside risk to inflation, with the potential to disrupt supply chains, already evident in rising shipping rates. While we are mindful of this risk, the next rate move is likely down – albeit not as low as we’ve witnessed over the last decade.

The fund has benefitted from higher rates and continued to deliver good risk-adjusted performance over the quarter. From a fund positioning perspective, our skew towards floating rate notes panned out well, however a rate cut environment will warrant a reassessment of the fund’s positioning, and potentially an increased exposure to fixed rate instruments in the near term.
